## INTRODUCTION

This report presents estimates of mobility status over the 1956-1961 period for residents of private households five years old and over and for members in the labour force, for census metropolitan areas. Persons who were born since June 1, 1956, and were thus under five years of age in the 1961 Census were excluded. The data include information on sex, age, marital status, schooling and metropolitan residence in 1961 for non-movers and for movers classified by type of movement. Internal migrants (i.e., persons who lived in a given municipality in Canada on June 1, 1956, but in another municipality five years later) are further classified by type of residence in 1956.

The estimates were based on information obtained from a twenty per cent household sample taken in conjunction with the 1961 Census and designed to represent all persons five years old and over living in private households. Residents in collective-type households such as institutions, hotels and large lodging-houses were excluded from the sampling universe. In

addition, persons enumerated as temporary residents were excluded unless they were also reported at their usual place of residence elsewhere in Canada. The sample, therefore, does not represent the total population enumerated in the 1961 Census.

The sampling units were private households, and the sample was drawn by systematic selection of every fifth household. Because of sampling variability involved, the number of persons in the sample does not coincide with twenty per cent of the total population five years old and over in private households. Deviations of the actual from the expected sample size, however, are generally small for all areas for which statistics are published.

Mobility status was measured on the basis of response given to the following questions asked of all persons 15 years old and over in each sample household:

|   |  |  |   |  |
|---|--|--|---|--|
| 1. Did you live in this dwelling 5 years ago, on June 1, 1956?                          | Same dwelling<br><input type="checkbox"/> 0  | Same city, town, etc., (not same home)<br><input type="checkbox"/> 1 | Outside of Canada<br><input type="checkbox"/> 2 | Different city, town, village, etc., in Canada<br><input type="checkbox"/> 3 |
| Omit Questions 2 and 3  |  |  |   |  |
| 2. In what city, town, village or municipality did you live?                            | <div style="display: flex; justify-content: space-between;"> <span>(Name of city, town, village, municipality, etc.)</span> <span>(Province or territory)</span> </div> <p><b>Important:</b> If outside a city or town limit, specify name of suburban municipality, and not that of city or town.</p> |  |   |  |
| 3. Was this dwelling on a farm or small agricultural holding? (One acre and \$50 sales) | No <input type="checkbox"/> 0      Yes <input type="checkbox"/> 1  |  |   |  |

The mobility status of persons 5 to 14 years of age was assumed to be the same as that of the family head. Persons whose mobility status was not reported were allocated among the mobility status categories on the basis of the reported mobility status distribution of respondents for each age-sex group in each of the geographic areas for which statistics are published in this report.

Estimates were derived by a ratio estimation procedure for each of the following 76 groups in each of the geographic areas for which tabulations were prepared:

### Groups

- 1-14 Males, single, 5 years old and over for 14 age groups
- 15-26 Males, married, 15 years old and over for 12 age groups
- 27-38 Males, widowed or divorced, 15 years old and over for 12 age groups
- 39-52 Females, single, 5 years old and over for 14 age groups
- 53-64 Females, married, 15 years old and over for 12 age groups
- 65-76 Females, widowed or divorced, 15 years old and over for 12 age groups

For each of the 76 groups in a given geographic area, the ratio of the complete count to the sample count of the population in the group was used as the weight for estimating persons in that group with characteristics about which information was obtained from the sample. Mechanical limitations did not permit the use of integer weights which would eliminate complications involved in rounding. Fractional weights used have inevitably introduced some rounding error, resulting in slight variations in corresponding totals and subtotals from one table to another. No attempt has been made to reconcile these minor discrepancies.

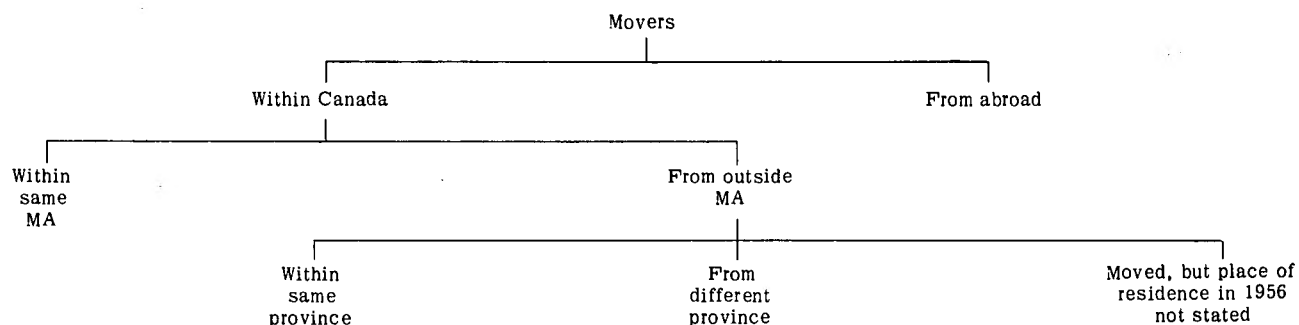

Any sample estimate is subject to sampling variability. Ratio estimates derived by using separate weights for the subgroups of the total population, however, would in general entail smaller sampling error than estimates based on a uniform weight. The estimation procedure adopted, moreover, would generally produce estimates consistent with the complete counts of the total population and its subgroups which are used as the basis for calculating weights.

The estimation procedure, however, cannot overcome biases introduced by failures of some enumerators to follow the sampling instructions. Nor can it overcome biases due to response variance and other enumeration errors or processing errors. Despite all efforts made to reduce such errors, they tend to occur in any large-scale statistical operation such as a decennial census. These problems are not unique to sample estimates, but are shared in common with complete counts of the population. With respect to migration statistics presented in this report, the over-all effect of the non-sampling biases involved was some understatement of mobility, particularly among the most mobile segments of the population. Some caution is required, therefore, in interpreting the results.

### Mobility status and type of movement

Mobility status and type of movement were determined on the basis of the reported usual place of residence on June 1 in 1956 and in 1961. If a person lived in the same dwelling on both dates, that person was defined as a non-mover. The category of non-movers, therefore, includes those who had moved during the five-year period but had returned by 1961 to their 1956 residence as well as those who had never moved during the period. If the dwelling where a person lived on June 1, 1961, differed from that five years earlier, that person was defined as a mover. Multiple movements over the period therefore are not accountable.

Movers were further divided as follows:

### Type of residence

(a) **Urban and rural** — In the 1961 Census all cities, towns and villages of 1,000 persons and over, whether incorporated or not, were classed as urban, as well as urbanized fringes of metropolitan areas, other major urban areas, and certain smaller cities where the city together with its urbanized fringe had 10,000 or more population. The remainder of the population was classed as rural.

(b) **Rural farm population** — The rural farm population comprised all persons living in dwellings situated on farms in rural localities. A farm for the 1961 Census was defined as a holding of one or more acres with the annual sale of agricultural products of \$50 or more.

(c) **Metropolitan areas** — Metropolitan areas as defined for the census relate to groups of urban communities in Canada which are in close economic, geographic and social relationship.

### Age

Age in the 1961 Census refers to the completed years of age at last birthday prior to June 1, 1961.

### Labour force

The 1961 Census labour force includes all persons, 15 years of age and over, who were reported as having a job of any kind, either part-time or full-time (even if they were not at work) or were reported as looking for work during the week prior to enumeration.

### Marital status

Totals shown under the heading "married" include all married persons whether living together or living apart for any reason, unless a divorce has been obtained.

### Symbols

The symbol (--) denotes that the total for a given group was less than 250.

The symbol (—) indicates that no individual with a given characteristic or a specified combination of characteristics was drawn into the sample.

## INTRODUCTION

Le présent rapport fournit des estimations sur la mobilité des personnes âgées de cinq ans et plus et des personnes faisant partie de la main-d'œuvre recensées comme membres de ménages autonomes dans les zones métropolitaines de recensement, durant la période de 1956-1961. Les personnes nées depuis le 1er juin 1956, qui n'avaient pas encore cinq ans lors du recensement de 1961, sont exclues. Le rapport contient des renseignements quant au sexe, l'âge, l'état matrimonial, le degré d'instruction, la résidence métropolitaine, en 1961, des personnes qui n'ont pas déménagé et de celles qui ont déménagé suivant le type de mouvement. Les migrants internes (personnes qui habitaient dans une certaine municipalité au Canada le 1er juin 1956, mais dans une autre, cinq ans plus tard) sont de plus classés suivant le type d'habitat en 1956.

Les estimations se fondent sur les renseignements obtenus, lors du recensement de 1961, d'un échantillon de 20 p. 100 des ménages, conçu de façon à représenter toutes les personnes âgées de cinq ans ou plus qui faisaient partie de ménages autonomes. Les résidents des ménages de type collectif comme les

institutions, les hôtels et les grandes maisons de chambres ont été exclus de l'univers sondé. De plus, les personnes recensées comme résidents temporaires ont été exclues, à moins qu'elles n'aient aussi été déclarées à leur lieu habituel de résidence ailleurs au Canada. L'échantillon ne représente donc pas toute la population dénombrée lors du recensement de 1961.

L'unité de sondage était le ménage autonome et l'échantillon a été prélevé par le choix systématique de chaque cinquième ménage. Vu la variabilité du sondage, le nombre de personnes dans l'échantillon ne coïncide pas avec 20 p. 100 de toute la population âgée de cinq ans ou plus qui habite les ménages autonomes. Les déviations entre les chiffres réels et la taille prévue de l'échantillon, toutefois, sont généralement petites pour toutes les régions au sujet desquelles des statistiques sont publiées.

La mobilité a été mesurée d'après les réponses aux questions suivantes, posées à toutes les personnes âgées de 15 ans ou plus dans chaque ménage de l'échantillon:

|  |   |
|--|---|
| 1. Habitez-vous ce logement il y a 5 ans, le 1er juin 1956?  | Même logement <input type="checkbox"/> 0            Même cité, ville, etc., (logement différent) <input type="checkbox"/> 1            En dehors du Canada <input type="checkbox"/> 2            Autre cité, ville, village, etc., au Canada <input type="checkbox"/> 3 |
| 2. Quelle cité, ville, village ou municipalité habitez-vous?   | (Nom de cité, ville, village, municipalité, etc.) ..... (Province ou territoire) .....<br><b>Important:</b> Si hors des limites d'une cité ou d'une ville, écrivez le nom de la banlieue, non celui de la cité ou de la ville.  |
| 3. Ce logement était-il dans une ferme ou petite exploitation agricole? (Une acre et \$50 de ventes) | Non <input type="checkbox"/> 0    Oui <input type="checkbox"/> 1  |

On a présumé que la mobilité des personnes âgées de 5 à 14 ans était la même que celle du chef de famille. Les personnes dont la mobilité n'a pas été déclarée ont été réparties entre les catégories de mobilité fondées sur la répartition observée des répondants suivant la mobilité pour chaque groupe d'âge-sexe dans chacune des régions géographiques au sujet de laquelle des statistiques sont publiées dans le présent rapport.

Les estimations ont été obtenues par une méthode d'estimation par quotient pour chacun des 76 groupes suivants dans chaque région géographique pour laquelle des calculs ont été faits:

### Groupes

- 1-14 Hommes, célibataires, 5 ans et plus pour 14 groupes d'âge
- 15-26 Hommes, mariés, 15 ans et plus pour 12 groupes d'âge
- 27-38 Hommes, veufs ou divorcés, 15 ans et plus pour 12 groupes d'âge
- 39-52 Femmes, célibataires, 5 ans et plus pour 14 groupes d'âge
- 53-64 Femmes, mariées, 15 ans et plus pour 12 groupes d'âge
- 65-76 Femmes, veuves ou divorcées, 15 ans et plus pour 12 groupes d'âge

Pour chacun des 76 groupes dans une région géographique donnée, le rapport entre le chiffre entier et le chiffre échantillon de la population du groupe a servi de coefficient pour estimer le nombre de personnes dans ce groupe possédant les caractéristiques obtenues au moyen de l'échantillon. Les limites d'ordre mécanique n'ont pas permis l'utilisation de coefficients entiers qui élimineraient les complications que suscite l'arrondissement des chiffres. Les coefficients fractionnels qui ont été utilisés ont inévitablement causé une erreur d'arrondissement, d'où les légères variations entre les totaux et les totaux partiels correspondants d'un tableau à l'autre. On n'a pas essayé de concilier ces légères divergences.

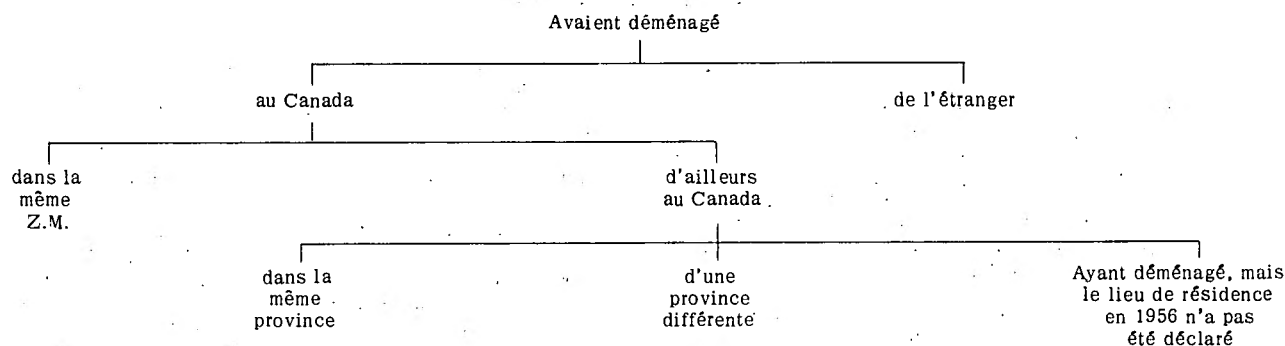

Toute estimation par sondage est sujette à une variabilité aléatoire. Les estimations par quotient obtenues en utilisant des coefficients distincts pour les sous-groupes de la population totale, toutefois, occasionnent, en général, de plus légères erreurs de sondage que les estimations fondées sur un coefficient uniforme. De plus, la méthode d'évaluation adoptée produit généralement des estimations conformes au chiffre total de la population et de ses sous-groupes, qui servent de base de calcul des coefficients.

Toutefois, la méthode d'évaluation ne peut éliminer les biais qui s'infiltrent parce que certains agents recenseurs ne suivent pas les directives relatives au sondage. Elle ne peut éliminer non plus les biais dus à la variance des réponses et à d'autres erreurs de dénombrement ou de dépouillement. Malgré tous les efforts déployés pour réduire ces erreurs, celles-ci ont tendance à se produire dans toute entreprise statistique de grande envergure comme un recensement décennal. Ces problèmes ne sont pas exclusifs aux estimations par sondage, mais se présentent aussi lors du dénombrement total de la population. Quant à la statistique visant les migrations dans le présent rapport, la conséquence générale des biais qui ne sont pas dus au sondage a été une certaine sous-estimation de la mobilité, particulièrement parmi les segments les plus mobiles de la population. L'interprétation des résultats exigera donc une certaine prudence.

### Mobilité et type de mouvement

La mobilité et le type de mouvement ont été établis d'après la résidence habituelle déclarée le 1er juin 1956 et 1961. Si une personne habitait le même logement aux deux dates, elle était considérée comme n'ayant pas déménagé. La catégorie des non-déménagés comprenait donc les personnes qui avaient déménagé durant la période quinquennale, mais qui étaient revenues, en 1961, à leur lieu de résidence de 1956 ainsi que celles qui n'avaient pas déménagé durant la période. Si le logement qu'habitait une personne le 1er juin 1961 différait de celui qu'elle habitait cinq ans plus tôt, cette personne était considérée comme ayant déménagé. On ne compte donc pas les déplacements multiples durant la période.

Les personnes ayant déménagé étaient ainsi réparties:

#### Genre de résidence

a) **Urbain et rural** — Au recensement de 1961, toutes les cités, villes et villages de 1,000 personnes et plus, constitués ou non, ont été classés urbains, ainsi que les banlieues urbanisées des zones métropolitaines, des autres grandes agglomérations urbaines et de certaines petites cités, lorsque la cité et sa banlieue urbanisée comprenaient une population de 10,000 habitants ou plus. Le reste de la population a été classé rural.

b) **Population rurale agricole** — La population rurale agricole comprend toutes les personnes habitant un logement situé dans une ferme, au sein des localités rurales. Selon la définition du recensement de 1961, une ferme est un lopin d'une acre ou plus, dont la production agricole rapporte au moins \$50 par année.

c) **Zones métropolitaines** — Les zones métropolitaines de recensement sont des groupes d'agglomérations urbaines étroitement liées par leurs intérêts économiques, géographiques et sociaux.

#### Âge

L'âge, au recensement de 1961, signifie l'âge atteint (en années révolues) au dernier anniversaire avant le 1er juin 1961.

#### Main-d'oeuvre

La main-d'oeuvre recensée en 1961 comprend toutes les personnes âgées de 15 ans et plus qui ont déclaré avoir quelque emploi, à temps partiel ou de plein temps (même si elles n'étaient pas au travail), ou comme ayant cherché du travail durant la semaine qui avait précédé le dénombrement.

#### État matrimonial

Les chiffres donnés sous la rubrique "mariés" comprennent toutes les personnes mariées vivant ensemble ou, pour quelque raison, à part de leur conjoint, à moins qu'elles aient obtenu un divorce.

#### Symboles

Le symbole (-) indique que le total d'un groupe donné était inférieur à 250.

Le symbole (-) indique qu'aucune personne possédant telle caractéristique ou bien telle combinaison de caractéristiques n'a été incluse dans l'échantillon.
